

I find it very unamerican to try and restrict XM Radio in what it can and can't broadcast to local users. Satellite TV can broadcast local channels into our homes, why can't Satellite radio broadcast local info? America has been the leader for innovations technology and freedom. XM Radio should be allowed to broadcast local information to it's subscribers. It would be like the cable companies not being allowed to broadcast local info into our homes because they are not local to our area.

I urge the FCC to reject the petition 04-160 as it is wrong, inappropriate and unamerican.
